Welcome to the UH Translational Health Science Simulation Center

The UH Translational Health Science Simulation Center (THSSC) is the only simulation center of its kind in Hawaii. It was funded as an innovative partnership between the Nancy Atmospera-Walch School of Nursing, HMSA Foundation, Hawaii Pacific Health, The Queen’s Medical Center, and Kaiser Permanente Hawaii.

UH THSSC brings real-life scenarios to the classroom so that students can gain the experience, confidence and skills they need to provide quality care. The center integrates state-of-the-art equipment, electronic patient records and practices currently used by the state’s leading medical centers. As a statewide resource, the center supports lifelong learning opportunities for Hawaii’s practicing nurses and the entire
health care team.

UH THSSC provides a hub for campus interdisciplinary biomedical and behavioral research and education on Oahu and via distance programming. Through the translational research efforts supported by the UH THSSC facility, research driven and evidence based practice innovations flow to practice settings to serve the people of Hawaii.

The THSSC was initially accredited by the Society for Simulation in Healthcare (SSH) in June 2014 and has been reaccredited through 2024.
